

STREAMCUT

Engineered for Accuracy

KIMLA STREAMCUT

FOR: CARBON STEEL, ALUMINUM, MARBLE, STONE, CERAMICS, GLASS, ETC.

- The StreamCut's galvanized steel table uses galvanized steel slats that can be positioned as needed, ensuring strong support, flexibility, and long-lasting durability. The rib height can be easily adjusted to maintain the ideal distance between the nozzle and the material.
- Stainless steel finishes and sealed drive components safeguard the machine from water and abrasive exposure.
- Accustream regulators allow operators to finely adjust the flow of garnet to match the material and cutting conditions, improving efficiency and reducing abrasive waste.
- The 200-liter (660lbs) abrasive tank with an automatic hopper allows long, uninterrupted cutting sessions without frequent refilling.
- Linear bearings on rigid rails provide exceptional stability and precision, offering a lifespan measured in tens of thousands of miles.
